

## **ABSTRACT OF THE DISCLOSURE**

The present invention pertains to a voice broadcasting method on cellular phone's buttons. The method is applied to let users listen and learn the corresponding message of each button on the cellular phone through the way of voice broadcasting in the meantime while they operate the keypad on the cellular phone. When users dial numbers or set any function of the cellular phone, according to the steps' order of the buttons being operated, the present invention informs users the steps' names by voice broadcasting at the right moment so that users are able to assure themselves whether the steps are correct or not. Due to the present invention capable of providing synchronous voice broadcasting of cellular phone's buttons, especially, when the light is dim in the operating surroundings or the cellular phones do not have any spontaneous light source, users are still able to confirm the accuracy of dialing numbers or setting functions.
